

Reduce your  
“Tire Footprint”™

*CryoPlay™ is an alternative to traditional bark, gravel or sand playground surfaces.*

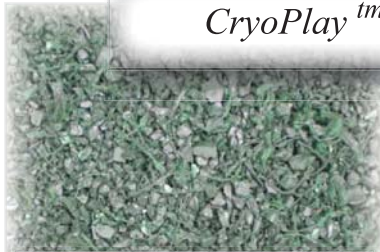

Call us for details.

***Spend your child’s playground time with comfort, not fear!***

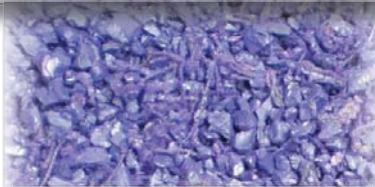

*CryoPlay™ is your ticket to a worry free playtime...*

*CryoPlay is an alternative playground surface that will reduce your child’s chance of injury. Odds are that traditional play surfaces will contribute to your child’s playground-to-hospital trip. Traditional play surfaces such as bark, gravel or sand are well known for their lack of impact absorption yet rubber is accepted as superior. The fact that CryoPlay is made from rubber means it acts as a cushion and doesn’t compact or degrade with use or time. As a bonus, you’re preventing tires from being dumped into landfills or piles where they become mosquito breeding fire hazards. Yes, that’s right, CryoPlay is recycled from used tires with a high tech, clean and green cryogenic process. Freezing tires is the key to getting the rubber steel free™. Reduce your “tire footprint” on the environment while providing exceptional safety for your child. CryoPlay doesn’t absorb water that may support mold, mildew, weeds or pests. CryoPlay is safe for people, animals and the environment. It provides excellent drainage and will not float away in heavy rain or leach colors. Contact us **TODAY** for details and get your CryoPlay on the way.*

***CryoPlay™ is available in several vibrant colors***

**Forest Green**

**Royalty Purple**

**Radiant Red**

**Ecogineering™: ecologically friendly... yet economically viable.**
